DATA SCIENTIST · data · engineering · ai

I'm currently a Data Scientist at **Fever** in Madrid. My work covers three areas: **data science**, the **engineering** that takes it to production, and **AI agents**.

01 / EXPERIENCE

Fever · Data Scientist
Madrid · 2024—now

Marketing & product teams · lead developer of **MarkAuto**, a marketing budget algorithm (~$540k/day)

[data]

+ **Halo causal model** of organic sales to isolate the incremental impact of paid marketing: cut overspend on inefficient campaigns to a third, enabling the system version that delivered **+31% Gross–Marketing** vs manual management.
+ **Bayesian bandit** that picks featured plans on landing pages: **+7.04% revenue per landing**, live in 207 cities.
+ **LP optimiser ("ID push")** for campaign creation to rescue concerts selling below a healthy pace: **+3.13pp occupancy** on at-risk concerts.
+ **Counterfactual backtesting** that validates every model and blocks deployments without real improvement; also evaluates manual budget overrides.
+ **Correction factors** (lost-opportunity, urgency, spend aggressiveness) that turn strategy changes into one parameter stakeholders tune, not a model change.

[engineering]

+ **End-to-end productionisation**: dbt feature tables, Airflow orchestration, training and deployment on Metaflow / MLflow, production serving (online DynamoDB / Ads API).

[ai]

+ **Agentic model-development loop**: target, evaluation set and success metric locked up front; autonomous iteration gated by automated leakage checks and regression thresholds before production.
+ **Agentic data pipelines**: LLM agents that search and scrape public websites into structured data (e.g. public holidays) for downstream pipelines.

Orange España · Data Science Intern
Madrid · 2023—2024

Demand generation

+ Ingestion pipeline for call-centre client data: cleaning and normalisation in Python, loading and management with SAS and SQL.
+ Lead volume forecasting with a time-series model; lead segmentation to understand conversion patterns.
+ Portability-behaviour profiling, identifying the interactions that predict portability.
+ Erlang model for call-centre efficiency using queueing theory; KPI tracking in PowerBI.

ADS BOX | Push Group UK · Digital Marketing Analyst & Paid Media Specialist
Sofia & remote · 2022—2023

02 / SKILLS

DATA
Supervised & unsupervised ML, deep learning, transformers, LLMs · causal inference, Bayesian inference, A/B testing & online experimentation, experimental design, hypothesis testing, forecasting & time series, multivariate analysis, model validation · linear programming, queueing theory · PowerBI

ENGINEERING
Python (Django, design patterns, hexagonal architecture, DDD, CQRS), C++ · SQL, Snowflake, PySpark, dbt · Airflow, Metaflow, MLflow · DynamoDB · AWS, GCP

AI
LangGraph · MCPs & tool use · multi-agent orchestration, agent handoff · RAG · skills · LLM evaluation & tracing

03 / PROJECTS

AGORA ↗ agoraplans.com
Personalised feed of plans to do: recommends, saves and explores.

Pocket Book Club ↗ mypocketbookclub.com
Create or join a book club, add books and play "the doubles".

Mesa · guía local ↗ beloslavaa.github.io
Local guide with a curated archive and a "best now" list.

04 / EDUCATION

Master, Management of AI & ML
Universidad Nebrija

Applied Statistics
Universidad Complutense de Madrid · graduated top of class, GPA 8.7 · President of the programming student association "Import Coffee"
